

THE PERFECT ANTI-ODOR FOR CANNABIS AND TOBACCO

It is specially designed to eliminate
tobacco and cannabis odors.

www.biopulcher.com

BIODOR CONTROL[®] CNB

Biodor Control CNB is the most effective odor eliminator on the market.

It is specially designed to eliminate tobacco and cannabis odors.

It is a solid gel that contains different odor neutralizers and inhibitors that, when evaporated, become gaseous and remain in the air until they come into contact with the odor molecules and eliminate them.

Due to its innovative technology and high concentration of active ingredients, the 33-gram format is more effective and longer lasting than similar 400-gram products that exist in the market.

The evaporation rate depends on the evaporation surface, temperature and air flow.

**BIODOR CONTROL
PRODUCTS
DO NOT
MASK ODORS, THEY
ELIMINATE IT**

Biodor Control CNB Neutral

This version is formulated to leave as little residual odor as possible after use. Its advanced, high-efficiency formula acts directly on odor molecules, neutralizing them completely. Enjoy a pleasantly fresh environment free of unwanted odors.

Biodor Control CNB Eucalyptus

Do you prefer a touch of fresh scent in the environment? The eucalyptus version of our Biodor Control CNB Gel is designed to leave a soft eucalyptus scent. It not only eliminates unwanted odors, but also brings a pleasant fragrance that transforms the sensation of the space.

Biodor Control CNB 33g

33g Format

6,8 x 3,2 x 1,5 cm

Removes odor from **spaces up to 50 m²**, the range will depend on the intensity of the odor to be treated. For crops or intense odors, the 200g and 800g formats are recommended. **Duration of 1 to 2 months**, depending on temperature and air flow.

Instructions for use:

1. Open the container, keep inside the protective cloth.
2. Place the gel in an ventilated area close to the source of the odor.
3. To optimize the performance, place the gel in the **Holder 33** or in the **Diffuser 33** (see accessories on pages 7 and 9).

Biodor Control CNB 200g

200g Format

10,5 x 13,5 x 1,5 cm

Removes odor from **spaces up to 250 m²**, the range will depend on the intensity of the odor to be treated. For very intense cultivation or odors, the range is reduced. **Duration of 1 to 2 months**, depending on temperature and air flow.

Instructions for use:

1. Open the zip container and remove the plastic coating.
2. The gel can be used by placing it in an ventilated area, placed in the air extraction duct or in the ventilation duct.
3. To optimize performance, place the gel in the 200 holder or 200 cartridge (see accessories on pages 7 and 10).
4. After handling, wash hands with soap and water. The use of protective gloves is recommended.

Biodor Control CNB 800g

800g Format

21 x 27 x 1,5 cm

Removes odor from **spaces up to 800m²**, the range will depend on the intensity of the odor to be treated. For very intense cultivations or odors, the range is reduced. **Duration of 1 to 2 months**, depending on temperature and air flow.

Instructions for use:

1. Open the zip container and remove the plastic coating.
2. The gel can be used by placing it in a ventilated area, placed in the air extraction duct or in the ventilation duct.
3. After handling, wash hands with soap and water. It is recommended to use protective gloves.

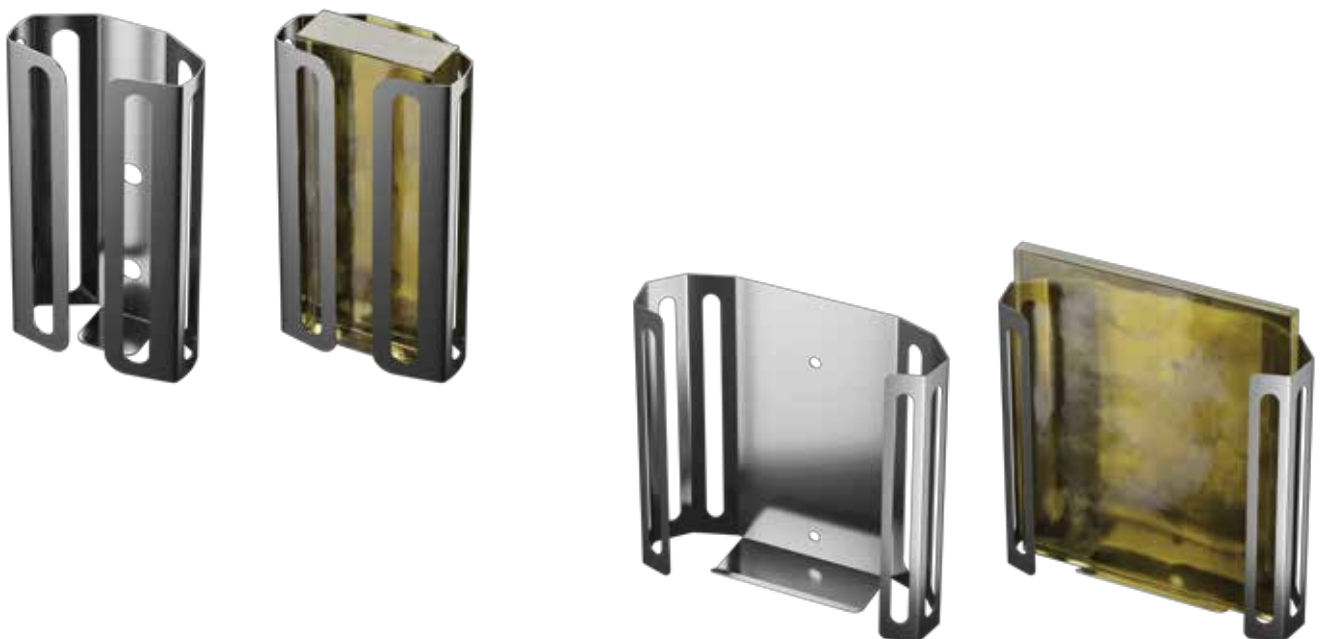

Accessories

Biodor Control CNB 33g and 200g

At Biopulcher, we take pride in offering complete odor control solutions, and our stainless steel supports are a perfect complement to our **Biodor Control CNB** product.

These **high quality, optimized design** brackets ensure greater efficiency by allowing the gel to evaporate from both sides, providing **wider and longer** lasting odor removal coverage.

Simplify the placement of Biodor Control CNB in your indoor spaces with Biopulcher supports.

Features / Benefits of stainless steel brackets.

1. High-quality material: Our supports are made of durable and strong stainless steel, ensuring a long service life and excellent corrosion resistance.

2. Compatibility with 33 and 200 gram formats: The supports are designed to fit perfectly with the two sizes of Biodor Control CNB we offer. This ensures secure and stable placement of the product on the desired surfaces.

3. Optimizing effectiveness: The stainless steel supports have been carefully designed to maximize the effectiveness of Biodor Control CNB. Thanks to their design, the gel can evaporate from both the front and the back of the bracket, allowing a wider distribution of the product and greater coverage of the affected area.

4. Easy installation: The brackets come with all the necessary accessories for quick and easy installation. They can be easily fixed to walls or ceilings using screws or adhesives supplied in the package.

Accessories

Diffuser 33

778g 125x105Ømm

Diffusion equipment that **increases the effectiveness** of Biodor Control CNB, thus achieving an unbeatable result. Indicated for places where odors are more intense.

Biopulcher Diffuser 33 propels air helping the release and diffusion of odor neutralizers contained in Biodor Control CNB.

Features

- Electric equipment with adjustable speed. Power supply included.
- Attractive and robust design. Made of stainless steel.
- Capacity from 1 to 3 portions of gel (33g).

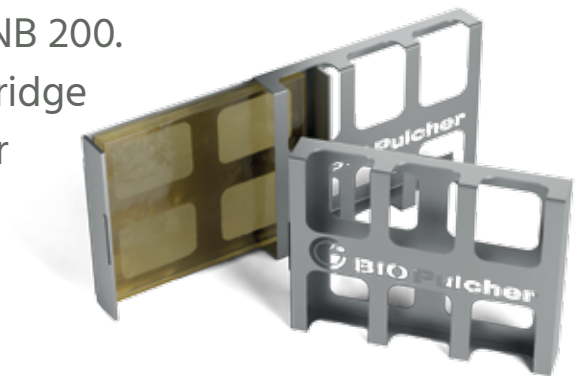

Accessories

Biodor Control CNB 200g Cartridge

Stainless steel cartridge for Biodor Control CNB 200. Once the gel is inserted inside, place the cartridge in an aerated area or inside the ventilation/air extraction duct.

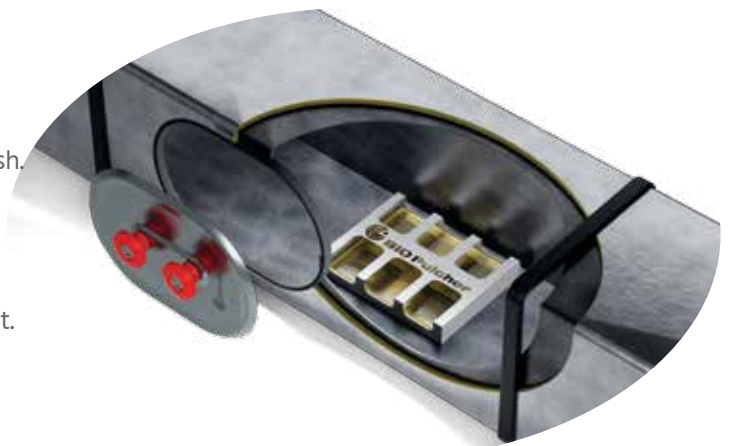

Ventilation and extraction traps

Biopulcher offers a range of hatches to facilitate the introduction of Biodor Control CNB in the air ducts. By placing the gel in the extraction circuit you will get the air outdoors without emitting any cannabis and/or tobacco odor. No more expensive activated carbon or ozone filters will be necessary. By placing the gel in the ventilation circuit, you will eliminate the odor from indoor areas quickly and efficiently. The ventilation ducts act as air diffusers helping the release and distribution of the odor neutralizers.

Manufactured from galvanized steel with a high level of finish.

Available for all diameters and types of ducts, both circular and rectangular.

Easy and fast assembly. Includes template and sealing gasket.

Is Biodor Control CNB an air freshener?

No, Biodor Control CNB is an odor neutralizer specially designed for cannabis and tobacco odors. It does not mask the odor, it eliminates it completely leaving a soft ambient fragrance.

What is Biodor Control CNB?

It is a harmless polymer containing a series of liquid odor neutralizers based on non-toxic natural and synthetic oils. These odor neutralizers are evaporated to create molecules that remain in the air coming into contact with odor molecules and neutralizing them.

How does Biodor Control CNB work?

Odors are chemical compounds, odor neutralizers break the chemical bonds between molecules and thus neutralize the odor.

How long does Biodor Control CNB last?

The duration will depend on the temperature, the air flow and the evaporation surface. The product is highly effective for 1-2 months, then it may continue to work but the effectiveness decreases.

What are the advantages of Biodor Control CNB?

- It is the most effective formulation on the market.
- The different formats allow us to eliminate odor from large indoor surfaces or from the air before going outside.
- Long lasting.
- Easy to use.

How much space will it cover?

It will depend on the intensity of the odor and the volume of air, but as a reference:

- The 33 gram format: Removes odor from spaces up to 50 m².
- The 200 gram format: Eliminates odor from spaces up to 250m².
- The 800 gram format: Eliminates odor from spaces up to 800 m².

The 200 and 800 gram formats need forced air to cover these superficies (place them inside the air extraction/ventilation ducts).

Does Biodor Control CNB affect plants?

The odor neutralizers contained in Biodor Control CNB are not toxic, they are volatile molecules that stay in the air, they cannot condense and affect plants. We are working with an accredited laboratory in order to certificate the harmlessness on plants.

Does it eliminate other types of odors?

Yes, as an additional benefit Biodor Control CNB eliminates to a lesser extent household and body odors.

Is Biodor Control CNB safe?

Yes, it is a safe product, there may be people allergic to some component or that it creates irritation. To avoid contact with the skin, the gel of 33 grams is wrapped in a breathable cloth.

Where can I buy Biodor Control CNB?

At our distributors and soon on E-commerce: www.biodorcontrolcnb.com

Use cases

Extraction systems

Indoor growing / Manipulation

Intense odors

Associations/ Clubs

Home / Car

Storage / Transportation

BIOPulcher

Biopulcher is a company that embraces eco-sustainable technologies.

We specialize in bioremediation treatments, as well as the manufacturing of odor eliminators and hydroalcoholic gel.

Our products are biological and non-toxic.
